About the Program:

This program is specifically aimed at engineers working in different organizations eager to enhance their knowledge on ethical business practices, international code of conduct of business ethics and transparent governance practices for peaceful deliverance of professional obligations. The certification will enable engineers to demonstrate their willingness to adhere to ethical values at all cost.

Corporate Governance is a topic of growing importance because of the enlargement of scale and complexity of business that is dictating regulatory bodies to enforce transparent systems with well-defined work scope and across the board accountability. From the perspective of the business organizations this is much needed for their very own survival and sustainability. Professionals get a competitive edge in their employability and growth both locally and internationally when during evaluation they demonstrate strong commitment towards personal integrity and business ethics. A common language and code of corporate governance has already been developed to cater the need of standardization and harmonization of business culture in this perspective.

Engineers are generally responsible for valuable assets of the organization, supply chain and large scale projects involving valuable cash flow of the organization. While most of the engineers are expert in their respective fields they have very limited awareness on intricate white collar frauds and clarity on ethical perspective of business transactions. A reasonable level of knowledge of corporate governance is essential for engineer to continue their journey on professional growth unblemished.

Understanding the need of engineers to have more than basic level awareness on the topic of corporate governance, NED University of Engineering & Technology in collaboration with Better Corporate Governance, Singapore is proud to offer the course on corporate governance specifically designed to cater the professional needs of engineers after successful completion of which they will have a competitive edge over others globally.

Expert Facilitator

MR. Sanjeev Gathani graduated from Australia with a Bachelor Degree in Banking & Finance from Monash University. He started his career with Price water House Malaysia as an Audit Executive where he learned the ropes of the external auditing in the financial services industry. He has been involved in several fraud investigation cases across the APAC Region. He also developed Compliance and Anti-Bribery Programs for US Multinationals within the APAC Region.
